

What is the

DIABETES DATA DOCK?

The Diabetes Data Dock (DDD) is a software platform designed to streamline the integration of diabetes data from continuous glucose monitors (CGMs), the electronic health record (EHR) and patient-reported outcomes.

Data Ingestion Pipelines

Automated tools for ingesting and harmonizing CGM, EHR and patient survey data

Standardization Framework

Modular data models and dictionaries aligned with common diabetes standards

Visualization Tools

Secure dashboards and analytics interfaces for research and clinical teams

Supportive Documentation

Technical materials and implementation guides to help facilitate local deployment
